

## Oral Pitch Illegal Transshipment CSOP Requests

During your oral pitch, please be prepared to address the following critical items:

- **Referral Packet Generation Process:** Demonstrate the end-to-end process of your referral packet generation, from data ingestion to final output. Highlight the underlying logic, decision points, and clear risk patterns used to detect illegal transshipment, leveraging your relevant trade experience. The demonstration should use the referral packet submitted in your application as the example.
  - Explain precisely how your solution identifies and flags violations of trade laws and regulations pertinent to illegal transshipment. Demonstrate how your referral packages directly enable CBP to take regulatory action and enforce trade compliance, specifically addressing:
    - Enhancing targeting efficiencies for illegal transshipment (preventing high-risk imports, tariff revenue collection and optimizing resource allocation).
    - Discuss the overall value proposition of your solution, including how it offers cost-effectiveness and a strong return on investment for CBP, particularly in the context of the specified pricing for option periods.
- **COTS Product Tailoring for Trade Enforcement:** Detail how your Commercial Off-The-Shelf (COTS) product is specifically tailored to CBP's illegal transshipment trade enforcement mission set, providing concrete examples of features, functionalities, or adaptations that directly address the unique challenge.
- **Ownership and Rights:** Clarify the ownership of the AI technology being utilized, including underlying source code, algorithms, and data models. Specify the ownership rights over any data ingested by your system, as well as rights related to future modifications, enhancements, and the use of any third-party components.
- **Data Sources and Integration:** Elaborate on all data sources (CBP-provided, commercial, open-source, proprietary, etc.) that are factored into the generation of your referral packages. Describe your methodology for integrating these diverse data streams and how you ensure data quality, relevance, and timeliness.
- **Scalability and Quantifiable Metrics:** Provide specific, quantifiable metrics for your solution's scalability, including throughput (e.g., how many shipments per hour/day it can process), latency, and infrastructure requirements needed to achieve full operational scale beyond the pilot.
- **AI Methodology, Accuracy, Explainability, and Transparency:** Provide clear explanations of your AI techniques, methodologies and algorithms. Focus on the "how" behind your AI, detailing how you ensure unbiased, explainable, and transparent systems.
  - Demonstrate precisely how you measure and validate the accuracy of your AI capabilities, describing how end users can understand the AI's reasoning.
  - Explain how your solution will meet or exceed the SOW's specific accuracy definitions
  - Detail your approach to continuous monitoring and improvement of AI accuracy.
- **Relevant Experience and Operational Fit:** Explain how your company's experience directly relates to the requirements of this solicitation to identify illegal transshipment in the supply chain.
